

BHSCT Health Literacy Workshop

This workshop will provide an opportunity to share learning, explore current developments in Health Literacy and coordinate Health Literacy activity across BHSCT.

Health Literacy refers to how well someone can find, read, understand and use health information and services to make choices about their health. It can be supported when services meaningfully engage people and communities and they work together to co-design clear, accessible information.

To register your attendance at this workshop and to tell us about the current resources you may be using to support health literacy please complete the MS Form on the QR code below.
